

Driver LC 15W 300/350mA fixC SR SNC2 China Domestic

ESSENCE series

Product description

- Independent driver with strain-relief housing
- Extra flat housing for constrained installation conditions (small ceiling cut outs and low ceiling voids)
- Max. output power 15 W
- Output current 300 or 350 mA
- For luminaires of protection class II
- For luminaires with M and MM as per EN 60598, VDE 0710 and VDE 0711
- Temperature protection as per EN 61347-2-13 C5e
- Nominal life-time up to 30,000 h
- 3-year guarantee

Properties

- Casing: polycarbonat, white
- Type of protection IP20
- Push-in terminals
- 2 separate strain relief parts for input and output cables with highly robust clamps

Functions

- Overload protection
- Short-circuit protection
- No-load protection
- No output current overshoot at mains on/off
- Burst protection voltage 1 kV
- Surge protection voltage 0.5 kV (L to N)
- Surge protection voltage 1 kV (L/N to earth)

Typical applications

- For spot light and downlight in retail and hospitality application
- For panel light and area light in office and education application

Standards, page 3

Wiring diagrams and installation examples, page 3

1. Standards

EN 55015
EN 61000-3-2
EN 61000-3-3
EN 61347-1
EN 61347-2-13
EN 61547
EN 60598-1

1.1 Glow wire test

according to EN 60598-1 with increased temperature of 850 °C passed.

2. Thermal details and life-time

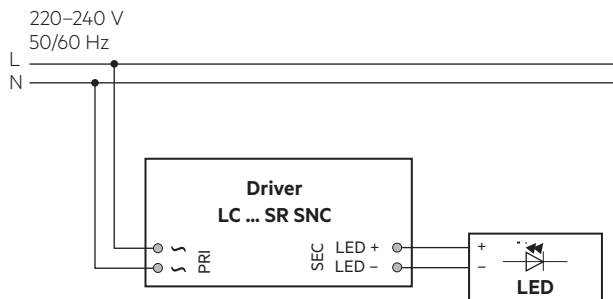

2.1 Expected life-time

| Expected life-time | | | |
|---------------------------|-----------|----------|----------|
| Type | ta | 40 °C | 50 °C |
| LC 15/300/50 fixC SR SNC2 | tc | 70 °C | 80 °C |
| | Life-time | 30,000 h | 20,000 h |
| LC 15/350/43 fixC SR SNC2 | tc | 70 °C | 80 °C |
| | Life-time | 30,000 h | 20,000 h |

The LED Drivers are designed for a life-time stated above under reference conditions and with a failure probability of less than 10 %. Life-time declarations are informative and represent no warranty claim.

3. Installation / wiring

3.1 Circuit diagram

3.2 Wiring type and cross section

The wiring can be in stranded wires with ferrules or solid with a cross section of 0.5–1.5 mm². Strip 8.5–9.5 mm of insulation from the cables to ensure perfect operation of the push-wire terminals. Use one wire for each terminal connector only.

3.3 Release of the wiring

Press down the “push button” and remove the cable from front.

3.4 Fixing conditions when using as independent Driver with Clip-On

Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature (ta) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire. Is not suitable for fixing in corner.

3.4 Wiring guidelines

- All connections must be kept as short as possible to ensure good EMI behaviour.
- Mains leads should be kept apart from LED Driver and other leads (ideally 5 – 10 cm distance)
- Max. length of output wires is 2 m.
- Secondary switching is not permitted.
- Incorrect wiring can damage LED modules.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

3.5 Replace LED module

1. Mains off
2. Remove LED module
3. Wait for 10 seconds
4. Connect LED module again

Hot plug-in or secondary switching of LEDs is not permitted and may cause a very high current to the LEDs.

3.6 Installation instructions

The LED module and all contact points within the wiring must be sufficiently insulated against 3 kV surge voltage. Air and creepage distance must be maintained.

4. Electrical values

4.1 Diagrams LC 15W 300mA fixC SR SNC2

4.1.1 Efficiency vs load

4.1.4 Input current vs load

4.1.2 Power factor vs load

4.1.5 THD vs load

THD without harmonic < 5 mA (0.6 %) of the input current:

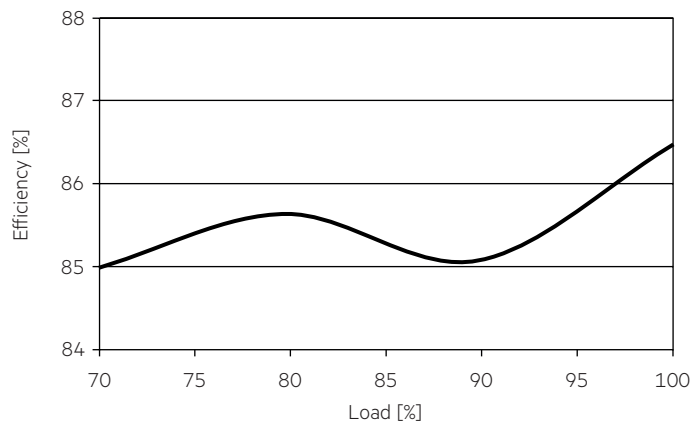

4.1.3 Input power vs load

4.2 Diagrams LC 15W 350mA fixC SR SNC2

4.2.1 Efficiency vs load

4.2.4 Input current vs load

4.2.2 Power factor vs load

4.2.5 THD vs load

THD without harmonic < 5 mA (0.6 %) of the input current:

4.2.3 Input power vs load

4.3 Maximum loading of automatic circuit breakers

Maximum loading of automatic circuit breakers

| Automatic circuit breaker type | C10 | C13 | C16 | C20 | B10 | B13 | B16 | B20 | Inrush current | |
|----------------------------------|-----|-----|-----|-----|-----|-----|-----|-----|----------------|---------------------|
| | | | | | | | | | Installation Ø | 1.5 mm ² |
| LC 15/300/50 fixC SR SNC2 | 52 | 67 | 85 | 104 | 32 | 41 | 50 | 62 | 14.5 A | 114 µs |
| LC 15/350/43 fixC SR SNC2 | 52 | 67 | 85 | 104 | 32 | 41 | 50 | 62 | 14.5 A | 114 µs |

4.4 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %

| | THD | 3. | 5. | 7. | 9. | 11. |
|----------------------------------|-------|------|------|------|------|------|
| LC 15/300/50 fixC SR SNC2 | < 150 | < 90 | < 70 | < 50 | < 30 | < 25 |
| LC 15/350/43 fixC SR SNC2 | < 150 | < 90 | < 70 | < 50 | < 30 | < 25 |

Acc. to 6100-3-2. Harmonics < 5 mA or < 0.6 % (whatever is greater) of the input current are not considered for calculation of THD.

5. Functions

5.1 Short-circuit behaviour

In case of a short circuit on the secondary side (LED) the LED Driver switches into hic-cup mode. After elimination of the short-circuit fault the LED Driver will recover automatically.

5.2 No-load operation

The LED Driver works in burst working mode to provide a constant output voltage regulation which allows the application to be able to work safely when LED string opens due to a failure.

5.3 Overload protection

If the output voltage range is exceeded the LED Driver will protect itself and LED may flicker. After elimination of the overload, the nominal operation is restored automatically.

6. Miscellaneous

6.1 Isolation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with 500 V_{DC} for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The isolation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V_{AC} (or 1.414 x 1500 V_{DC}). To avoid damage to the electronic devices this test must not be conducted.

6.2 Conditions of use and storage

Humidity: 5% up to max. 85%,
not condensed
(max. 56 days/year at 85%)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range (T_a) before they can be operated.

6.3 Additional information

Additional technical information at www.tridonic.com → Technical Data

Guarantee conditions at www.tridonic.com → Services

Life-time declarations are informative and represent no warranty claim. No warranty if device was opened.
